

## 360 Virtual Tour

### Key Features

#### Full screen map display

Map will be displayed on the top right corner of virtual tour when in full screen mode.

#### Action technique

Lets users add certain actions to the component according to different situations.

The user can control movements in each area by holding and moving the mouse in different directions (right, left, up and down)

#### Dynamic text

Users can get specific content based on scenes, maps or even in an area you point at using the mouse.

#### Toolbar

A full screen virtual tour toolbar gives users more control over all actions.

#### Hotspots effect

This feature lets you define different areas on an image to act as hot spots. The user can simply click on these to shift from area to area; or the user can move around on the virtual tour itself by clicking on the green arrows.

#### Walkthrough effect

This special effect gives the user a personal point-of view, as though he himself is walking from one scene to another.

### Interactive Realization

- Radar
- Zoom in and out
- Day and night mode
- Full screen Virtual Tour viewing
